Is your location a fit for a Helium hotspot?

Helium hotspots are small Wi-Fi radios that provide real mobile coverage where people gather — and hosts earn rewards for the eligible data their hotspot actually carries. Placement is everything. If your business checks these six boxes, your address is worth a free check.

Tysons, VA — dense, busy, and full of people on phones. Exactly the kind of place the Helium Network rewards.

THE SIX FIT CHECKS — FROM HELIUM'S OWN DEPLOYMENT GUIDANCE

- ✓ **People, gathered & lingering.** Best in commercial places where slow-moving people gather: coffee shops, restaurants, retail, malls, gyms, salons, hotels, offices, transit, waiting rooms.
- ✓ **A coverage-need address.** Your site is where the network wants coverage — checked on Helium's demand maps & Coverage Planner. Wanted areas first; saturated blocks are a pass.
- ✓ **High, central & unobstructed.** Clear line of sight to where people will use it. Indoors: high on a wall or ceiling, central. Outdoors / IoT: as high as possible — rooftop beats windowsill.
- ✓ **Real broadband + steady power.** Stable internet the hotspot can share (wired Ethernet preferred) that can pass speed & quality checks, and power that stays on. Offline hotspots don't earn.
- ✓ **Permission & a stable spot.** You own it, or the manager can say yes — and the hotspot can stay securely mounted, unmoved. Moving it without re-asserting its location hurts rewards.
- ✓ **One hotspot, uniquely placed.** Spaced from its neighbours so it adds new coverage instead of competing with the hotspot next door.

Tysons Galleria — the model host location: foot traffic, dwell time, phones out.

BEST-FIT BUSINESSES AROUND TYSONS & FAIRFAX

Cafés & bakeries · restaurants & bars · retail & shopping centers · gyms & studios · salons & barbers · medical, dental & auto waiting rooms · hotels · offices & apartment common areas · churches & schools

PROBABLY NOT A FIT

- Low-traffic or by-appointment-only spaces; empty land or parking-only lots
- Basements, back closets, or metal enclosures the signal can't escape
- Internet that's struggling or not yours to share; no owner/manager permission

HOW IT WORKS — WE DO THE WORK

1 · Send us the address

Email or call with the business name and address. That's all we need to start. Everything is confidential.

2 · We check it, free

We run it against Helium's demand maps & Coverage Planner, survey the site, and tell you honestly if it's a fit — and what it could earn on real usage.

3 · We install & support it

Survey, mounting, connection, configuration, and ongoing support are ours. You provide the busy location, power, and internet. EnviroMine handles everything else.

Think you check the boxes? Get the free check.

Guidance summarized from Helium's official documentation and Helium Mobile Hotspot deployment guidance (docs.helium.com; hardware.hellohelium.com), October 2026: deploy where people gather, mount high with a clear line of sight, check the Coverage Planner, and keep quality of service up — a hotspot's readiness and QoS affect its eligibility for carrier offload, and rewards are based on eligible data transferred. Network rules are set by the Helium community and can change. Host rewards vary with usage, location, and network conditions; no earnings are guaranteed.
